Briggs – Further Drilling Progress

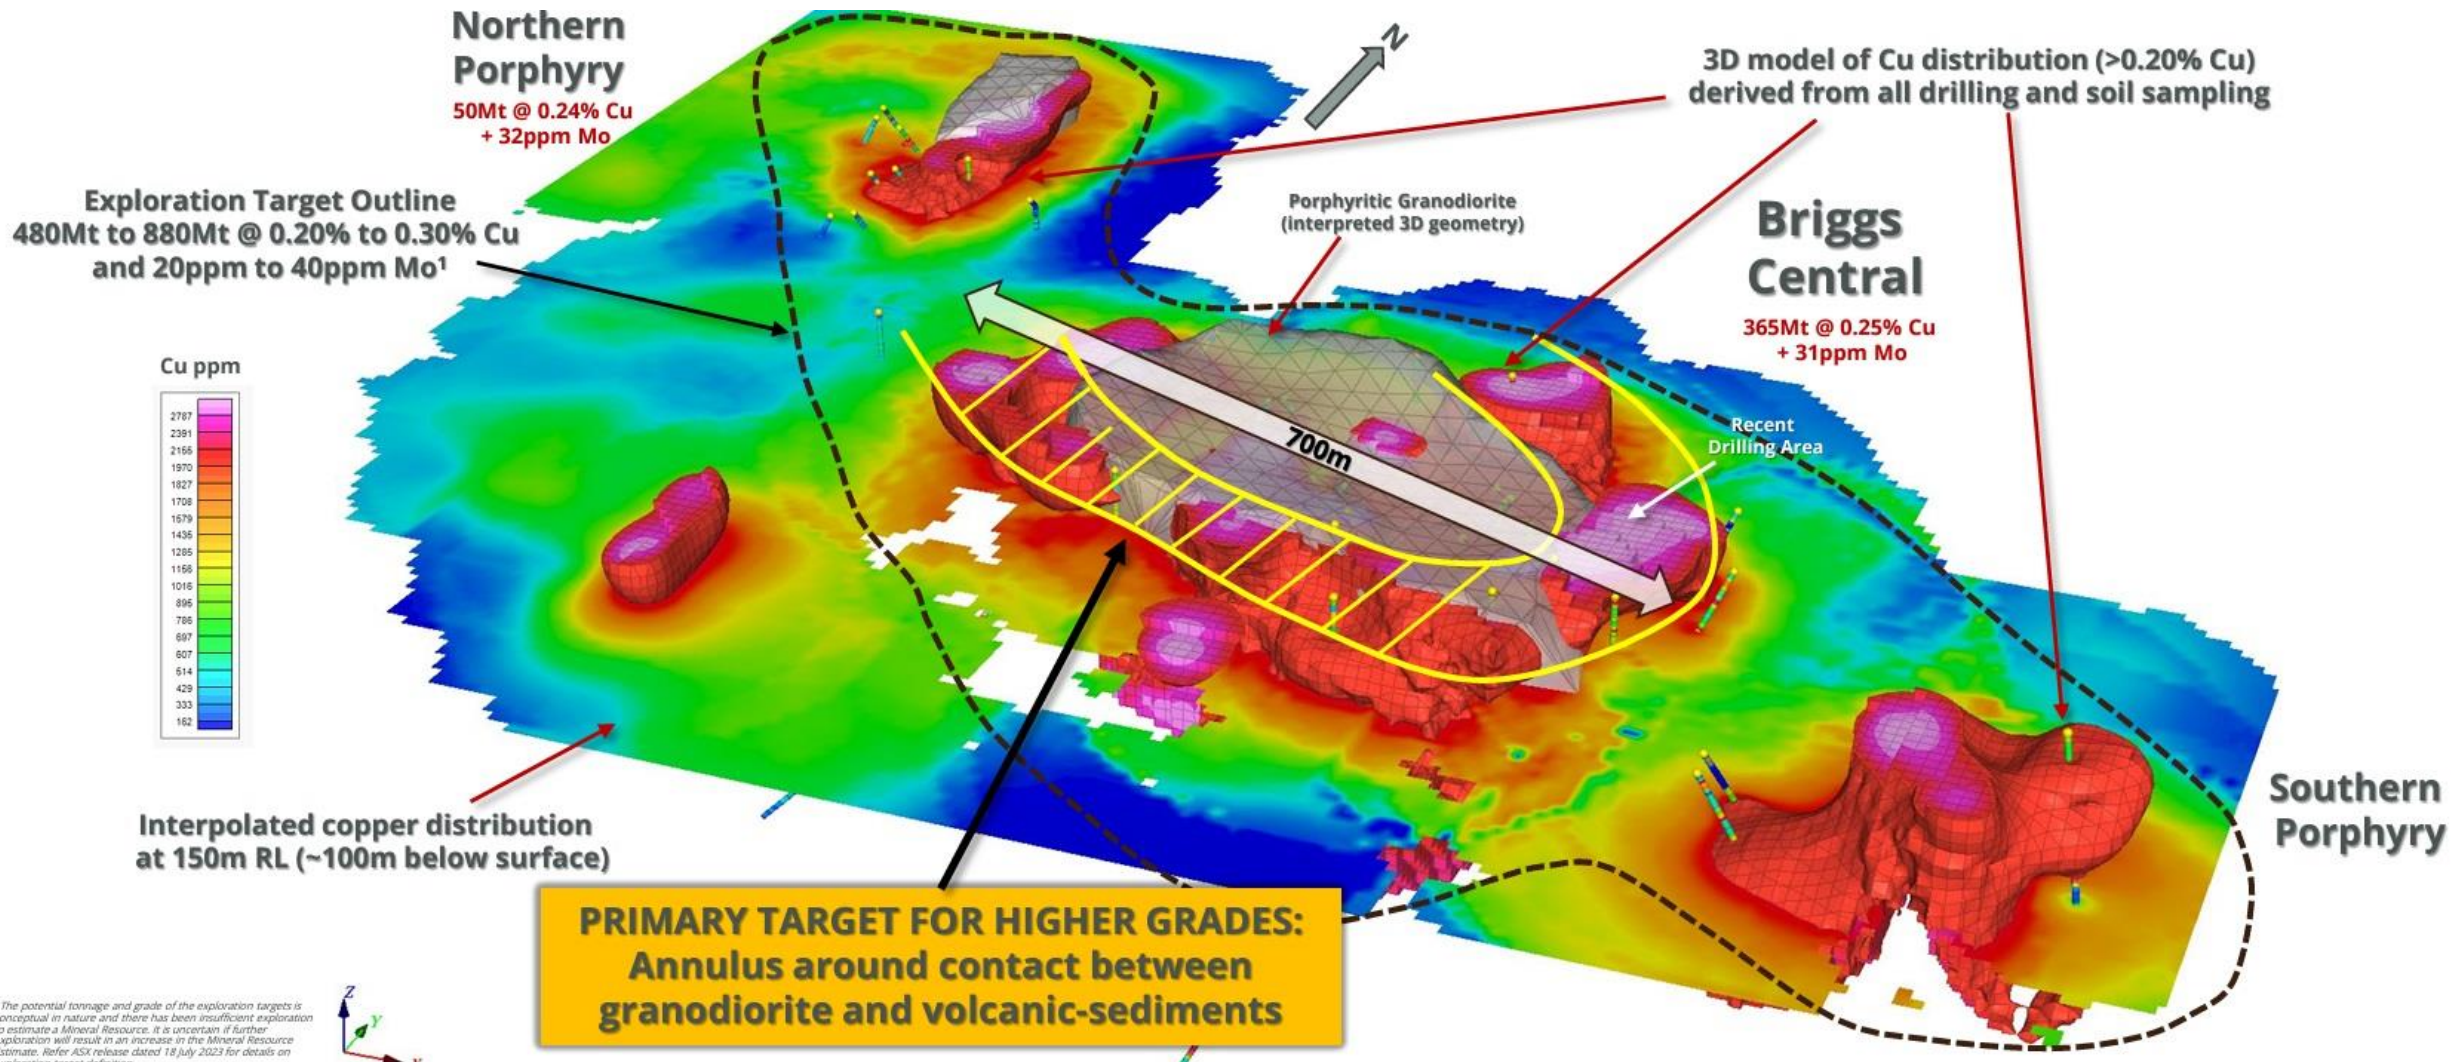

Encouraging recent results

- 2023 drilling tested selected margins of the Briggs Central deposit*
- Drilling along the SE margin confirmed the continuity of shallow, higher-grade copper-molybdenum mineralisation
- Higher grades occur in the “contact zone” straddling the granodiorite intrusion and enclosing volcanic sediments
- In-fill and extension drilling scheduled to commence in May 2024
- Opportunity to delineate higher-grade mining areas, for early production

Briggs – Targeting Higher Grade Zones in 2024

¹ The potential tonnage and grade of the exploration targets is conceptual in nature and there has been insufficient exploration to estimate a Mineral Resource. It is uncertain if further exploration will result in an increase in the Mineral Resource Estimate. Refer ASX release dated 18 July 2023 for details on exploration target definition.
